Summary

Full-stack engineer (React, Next.js, Node.js, PostgreSQL) who moves fast by leaning on AI tooling — Claude Code, Codex, Kimi, prompt engineering — to prototype and ship. Background in game development and UX design shapes how I build interactive, learning-focused products. Co-Founder of BURAQ Games Studio, where I pair engineering with shaping the studio's culture, processes, and internal tools.

Experience

01/2026 - Present	BURAQ Games Studio
Remote	Co-Founder
	- Collaborated on studio vision, mission, and strategy, and phrased and designed the Burraq Studio Charters. - Managed game design, development planning, team coordination, and production tasks. - Built the studio's infrastructural framework, contributing to a sustainable, process-driven system that maximizes team productivity and supports continuous growth. - Wrote and maintained studio documentation, and expanded and restructured communication and community channels. - Designed the UI/UX of the studio's website and internal apps, and introduced management tools including a new-hire meeting template and an in-progress org management tool. - Used tools such as Unity, Godot, Blender, GitHub, Gitea, Plane, and Figma.
09/2024 - 09/2025	Black Iris
Amman	Software Engineer
	- Contributed to the development and maintenance of software features. - Collaborated with the team to debug issues, review code, and improve system reliability. - Worked on both frontend and backend tasks using modern development practices.
01/2023 - 07/2024	Trek Medics International
Remote	Full-Stack Engineer
	- Built and maintained full-stack features to support internal and user-facing workflows. - Integrated APIs and improved communication between different system components. - Collaborated remotely with the team to deliver stable and user-focused updates.

Skills

Soft Skills Teamwork, Time Management, Dependability, Organization, Adaptability, Continuous learning	Backend TypeScript, JavaScript, .NET, Node.js, Express.js, C#, Java, Python	Databases & ORMs PostgreSQL, MySQL, MongoDB, Prisma, Drizzle ORM	AI Prompt Engineering, Claude Code, Codex, Kimi
Frontend React, Next.js, TanStack Query, Tailwind, Figma	APIs & Tools RESTful APIs, Git & GitHub, Docker, Gitea, Plane, Notion	Game Development Godot, GDScript, 3D Modeling, Unity	Production Project Management, Production Planning / Agile-style Frameworks

Projects	
09/2026 - Present	Wastons Gone — Project Manager (BURAQ Games Studio, first production) Buraq Games Studio's first full production — a PC game currently in development, targeting release on Steam. - Leading the studio's first full production as Project Manager, running planning, scheduling, and cross-discipline coordination from a September 2026 start toward a planned December 2026 milestone. - Designed and drove a two-phase production framework covering GDD breakdown, team/role structuring, product backlog creation, and milestone timelines. - Actively iterating the framework mid-production based on continuous evaluation. - Ran cycle planning, daily/periodic stand-ups, and review/approval workflows to keep the backlog moving and unblock leads.
08/2026	Brackeys Jam 2026 — Team Lead (BURAQ Games Studio) - Led the team through the game jam. - Developed an early framework for daily progress, later matured into Buraq's full production framework. - Created concept UI for the game.
Concept UI (Excalidraw)	
12/2025 - 01/2026	Anjez — User Experience Engineer Web-based task management application to help users organize, track, and manage tasks efficiently. - Developing the frontend using Next.js, React, TypeScript, and Tailwind CSS with a focus on performance and usability. - Implementing backend functionality using Node.js, Express.js, Prisma ORM, and PostgreSQL. - Designing the full UI/UX in Figma. - Used Claude Code and Codex to accelerate prototyping and iteration across the frontend and backend.
02/2024 - 06/2024	CodeQuest — User Experience Engineer A Unity-based educational prototype designed to gamify the programming learning curve, using an adaptive difficulty system to guide users through technical concepts based on their career interests. - Built an adaptive-difficulty learning system that gamifies programming education based on user career interests. - Collaborated on game mechanics and learning flow to improve player retention. - Designed and implemented a complete game level using Figma and Unity. - Designed and made the promotional materials of the game, including the official game poster.
01/2026 - 04/2026	HEXYBER (3D) — Game Developer A 3D multiplayer game built in Godot with Blender-integrated assets. - Developed an online multiplayer system, allowing players to host or join rooms via IP and port. - Designed and implemented the core game mechanics. - Imported, configured, and integrated 3D assets (Blender) within Godot.
05/2025 - 07/2025	Al-Hakika — User Experience Engineer A news website designed to deliver timely and accurate content to readers.
Education	
2020 - 2025	Bachelor of Computer Science Yarmouk University
